DATABASE SYSTEMS ENGINEERING AND DISTRIBUTED BACKEND DEVELOPMENT (25CS1302E)

Y25 - 2026-2027 Trimester - 4

Project Abstract Submission Form

Sec No- 07	Team No- 18	Project Title- Subscription and Billing SAAS For Banking and Fintech
------------	-------------	--

1. Abstract

The **Subscription and Billing SaaS for Banking and Fintech** is a platform designed to simplify the management of customers, subscription plans, billing, invoices, and payments in banking and fintech applications. Customers can choose plans, manage subscriptions, make payments, and view their billing history, while administrators can manage plans, customers, transactions, and revenue. The system uses **PostgreSQL** for important financial data and **MongoDB** for flexible data such as usage records and activity logs. **FastAPI** is used to develop secure backend APIs, with features such as JWT authentication and role-based access control. A **microservices architecture** is used to separate services such as users, subscriptions, billing, payments, and notifications. Docker and Kubernetes support deployment and scalability, while monitoring tools help track system performance and reliability. Overall, the project combines database systems, backend development, distributed systems, security, and DevOps concepts in a practical fintech application.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030027	Venkata Sai Krishna	
2520030029	Pujith Pavan Kumar	
2520030324	Srivarun	

3. Frameworks / Platforms / Software Used

Frontend: React.js, HTML5, CSS3, Bootstrap/Tailwind CSS, Axios. Backend: Node.js, Express.js, JWT-based authentication, REST APIs. Database: MySQL / PostgreSQL. Tools & Platforms: Git & GitHub, Postman, Visual Studio Code, npm, Vercel/Render (deployment).
